EDUCATION

Bachelor of Computer Applications —
Cyber Security

Hindustan Institute of Technology &
Science, Chennai

2023 – 2026 · CGPA 9.23/10

Class Representative

CORE SKILLS

Scripting & Automation

Python · Bash · PowerShell

SIEM & Detection

Splunk · Wazuh · Sumo Logic · Sysmon

Security Tools

Wireshark · Nmap · Metasploit · Burp Suite

Networking

TCP/IP · DNS/HTTP(S) · VPN · Firewall · IDS/IPS

Frameworks

MITRE ATT&CK · DFIR Fundamentals

CERTIFICATIONS

SOC Level 1 — TryHackMe

Jr Penetration Tester Path —
TryHackMe

Cybersecurity Fundamentals — IBM
SkillsBuild

Networking Basics — Cisco NetAcad

CTF & RECOGNITION

TCS HackQuest — interview offer (2
rounds cleared)

PEC CTF — Top 5 of 100+ teams

Cybertron CTF — Rank #34, 4,430 pts

PROFILE

BCA Cyber Security graduate with hands-on SOC training and a habit of automating security workflows — from an AI agent that triages SIEM alerts to a Python platform that automates VAPT reporting. Comfortable scripting in Python, Bash, and PowerShell, and drawn to turning repetitive security processes into reliable, well-documented automation.

AUTOMATION & SECURITY PROJECTS

AISA — AI SOC Analyst *Personal Project, in development | Python · LLM Tool-Calling*

- Building a local Python AI agent that triages SOC alerts through native LLM tool-calling, so the model itself decides when to call a tool — replacing an earlier regex-based router that failed on real queries.
- Architected a modular tool registry (one shared interface: name, description, schema, execute) so new integrations — Splunk, VirusTotal, MITRE ATT&CK, Wazuh — can be added without touching core agent logic.
- Currently building the tool-calling execution loop against a locally hosted LLM, with confidence-scored TP/FP verdicts mapped to MITRE TTPs planned next.

Web VAPT Document Automation Tool *Python · JWT · REST APIs*

- Built a web platform that automates VAPT documentation and report workflows, cutting manual reporting effort on penetration-testing engagements.
- Implemented JWT authentication and role-based access control, then tested the app's own auth flows for access-control vulnerabilities.
- Automated report creation, editing, export, and email delivery, reducing manual work across the release cycle.

Mini SOC Lab *Splunk · Sysmon · Kali Linux · VMware*

- Architected a 3-node SOC lab (Splunk on Debian + 2 Windows endpoints) and ran adversarial simulations from Kali Linux to generate real attack telemetry.
- Engineered custom Splunk detection rules — SSH brute-force, failed-auth chains, suspicious process creation — reaching a sub-30-second mean time to detect.

Also currently designing CloudPilot AI, a natural-language AI agent for AWS operations (cost, security findings, Terraform) — architecture and documentation phase.

EXPERIENCE

Cyber Security Trainee — HTC Global Services *Chennai | June 2025 – April 2026*

- Completed a 10-month structured SOC training program spanning Windows/Linux administration, networking, SIEM concepts, incident response, and DFIR fundamentals.
- Monitored and investigated events in Sumo Logic — set up log pipelines, wrote search queries, and built dashboards surfacing anomalous authentication and lateral movement.
- Ran vulnerability assessments and adversarial simulations with Nmap and Metasploit, mapping findings to MITRE ATT&CK to strengthen detection strategy.
