PROFESSIONAL SUMMARY

Cyber security fresher with hands-on experience in SIEM (Wazuh, Splunk, Sumo Logic), log analysis, incident triage, and detection rule engineering through an internship at HTC Global Services and a self-built SOC home lab. Completed TryHackMe SOC Level 1 path; demonstrated threat detection and alert investigation skills via CTF placements including a TCS HackQuest interview offer and PEC CTF Top 5 finish. Seeking an L1 SOC Analyst role to contribute practical skills in security monitoring, false positive triage, IOC identification, and MITRE ATT&CK-mapped threat response.

WORK EXPERIENCE

HTC Global Services

Cyber Security Trainee

Chennai, India
June 2025 – April 2026

- Built foundational SOC operations competency across **6 cybersecurity domains** — Windows/Linux administration, network protocol analysis, SIEM concepts, **incident response lifecycle**, and **DFIR** — over a 10-month structured training programme.
- Monitored and investigated security events using **Sumo Logic SIEM** — configured log collection pipelines, authored search queries, and built dashboards to surface **anomalous authentication** and **lateral movement** indicators across training environments.
- Detected and analysed security event categories — including failed logon patterns, suspicious process creation, and network anomalies — by correlating Wireshark packet captures, Sysmon telemetry, and Windows Event Log data for alert investigation and **false positive triage**.
- Executed network reconnaissance and vulnerability assessment using Nmap and Metasploit in adversarial simulation exercises, mapping identified attack techniques to **MITRE ATT&CK** TTPs to strengthen defensive detection strategies.

PROJECTS

Mini SOC Lab

Wazuh | Log Analysis | Sysmon | Kali Linux

- Architected a 3-node SOC home lab (**Wazuh SIEM** on Debian + 2 Windows 11 endpoints via VMware) to simulate real-world threat detection, **incident triage**, and **alert escalation** workflows end-to-end.
- Conducted **adversarial simulations** from Kali Linux — executing reconnaissance, exploitation, and persistence **TTPs** against a Windows 11 target — generating high-fidelity security telemetry for log analysis and **detection validation**.
- Engineered custom **Wazuh detection rules** — including **SSH brute-force**, failed authentication chains, and suspicious process creation patterns — triggering real-time alerts with sub-30-second **mean time to detect** (MTTD) on simulated attacks.
- Iteratively expanded lab coverage to include additional **MITRE ATT&CK**-mapped attack scenarios, enhancing **detection rule coverage** and SOC threat detection proficiency across multiple attack stages.

Web VAPT Document Automation Tool

Python | JWT | REST APIs

- Developed a web-based automation platform to streamline **VAPT** documentation, software release management, and report exchange workflows, reducing manual reporting effort for **penetration testing** engagements.
 - Implemented **JWT-based authentication** and **role-based access control (RBAC)** to enforce secure user access and document management, validated through security testing of all authentication flows.
 - Tested and validated **REST API** endpoints for authentication, authorisation, and **access control vulnerabilities** — identifying and remediating security misconfigurations to strengthen the application's security posture.
 - Built automated features for creating, editing, exporting, and emailing VAPT reports, improving documentation accuracy and reducing manual effort across the release management workflow.
-

SKILLS

SIEM & Log Analysis: Wazuh, Splunk (Basics), ELK Stack (Basics), Sumo Logic, Windows Event Logs, Sysmon
Threat Detection & SOC: Alert Investigation, False Positive Triage, Log Analysis, Incident Triage, IOC Identification, Alert Escalation, MITRE ATT&CK (Fundamentals), Detection Rule Engineering
Operating Systems: Windows (Administration & Troubleshooting), Linux (Administration & Troubleshooting)
Networking: TCP/IP, DNS, HTTP/HTTPS, OSI Model, VPN, Firewall, IDS/IPS
Security Tools: Wireshark, Burp Suite, Metasploit, Nmap, Snort, VirusTotal, AbuseIPDB
Scripting & Automation: Python (Basics), Bash, PowerShell
Soft Skills: Analytical Thinking, Problem-Solving, Adaptability, Teamwork, Communication

EDUCATION

Bachelor of Computer Applications (BCA) — Cyber Security
Hindustan Institute of Technology & Science, Chennai

- Specialisation: Cyber Security
- Class Representative

2023 – 2026
CGPA: 9.23 / 10 (92.3%)

CERTIFICATIONS

1. SOC Level 1 — TryHackMe	Jun 2026
2. Networking Basics — Cisco NetAcad	Mar 2026
3. Jr Penetration Tester Path — TryHackMe	Jan 2026
4. Cyber Security 101 — TryHackMe	Dec 2025
5. Cybersecurity Fundamentals — IBM SkillsBuild	Jul 2024

ACHIEVEMENTS

- Earned a **TCS interview offer** by advancing through 2 elimination rounds of HackQuest CTF, solving challenges in JavaScript deobfuscation, DNS-over-HTTPS traffic analysis, and API security testing.
- Secured **5th place** in the PEC Capture The Flag (**CTF**) competition out of 100+ participants, demonstrating skills in cryptography, OSINT, steganography, and reverse engineering.
- Ranked **#34** with **4,430 points** in Cybertron CTF — a 30-hour continuous Jeopardy-style event — competing against cybersecurity students and professionals.
